

Name: _____

Assume main memory is large enough to hold **two** pages. If main memory is full, a page must be swapped out from main memory so that another can be loaded.

1. Assume the following pages need to be read from (or written to) in the given order : 1 3 1 2 1 4 1 4 1 2
 - (a) Using FIFO, how many page hits would occur?

 - (b) Using LRU, how many page hits would occur?

2. Assume I have four virtual pages (1, 2, 3, 4) and I need to read from each page 3 times.
 - (a) Give a page order example in which LRU results in 8 page hits

 - (b) Give a page order example in which LRU will perform no better than FIFO
