Assume I have the inode table pictured below.

Use this table to answer all questions below (ignoring the highlight of inode 32).

1. What is the inode size in this file system?
2. Show how you would calculate the address of inode 32.
3. Show how you would calculate the address of inode 36.
4. Assuming sector size 1024 (1k) bytes, in which sector is node 36? Show your steps as to how the file system would calculate this.
5. How would the file system locate the file associated with an inode?
